Payment Gateway Capabilities

Facilitate secure and seamless transactions in the online world.

- **Secure Transactions:** Advanced encryption and security protocols ensuring sensitive payment information is protected against unauthorized access or fraud.
- **Multiple Payment Options:** Wide range of payment methods, including credit cards, debit cards, digital wallets, and bank transfers, catering to diverse customer preferences.
- **Integration Capabilities:** Seamlessly integrate the payment page to website, mobile app, or e-commerce platform, enabling smooth checkout experiences.
- **Real-Time Processing:** Enable swift authorization and settlement of payments, reducing waiting times and enhancing customer satisfaction.
- **Comprehensive Reporting:** Robust reporting and analytics tools provide valuable insights into transaction data, help track sales performance, identify trends, and make informed business decisions.

A feature-rich gateway

Dynamic Routing: We provide multiple gateways to ensure uninterrupted transaction flow, re-routing to a different server in case of any glitch.

Mobile Optimized Payment Page: Allows to access the site through mobile devices to view and make payment in a user-friendly manner.

Schedule Payments: Allow users to set up automated debits from their bank accounts via UPI, Debit Card and Net Banking.

Retry: NDPS' retry facility eliminates the process of filling in payment details again, during a transaction failure due to time-out or connectivity issues.

Express Checkout: Allows to store the card number and expiry date to eliminate the process of entering the same before every transaction.

Real-Time Reports and Admin Module: NDPS provides a Merchant Admin Console which assists in monitoring transactions online, on a real-time basis.

Transaction Success Rate: Ensure highest success rates by allowing your customer's transaction to be routed through an active gateway.

Multi-Account Settlement: NDPS provides multi-account settlement solutions based on the industry's requirements

Customized solutions: Solutions especially made to empower your business and boost your sales.

Settlement at your Convenience

Transaction-wise

Transactions are settled individually, meaning each transaction is settled separately. The settlement amount for each transaction is calculated and posted to the respective accounts.

Account

Transactions are settled based on the total transaction amount for each account. Instead of settling individual transactions, the total transaction amount for each account is calculated, and a single settlement amount is posted to the account. If multiple MIDs have same account, then there will be single settlement entry for transaction amount of all the MIDs.

**Payment
Received**

MID + Account

Involves grouping transactions based on both the Merchant Identification Number (MID) and the account. Transactions are settled by combining all transactions associated with a specific MID and posting the settlement amount to the corresponding account.

MID + Product + Account

Transactions are grouped based on the MID and account. However, this method adds an additional criterion: the product. Transactions are grouped based on the MID, the specific product or service involved in the transaction, and the account. The settlement amount is then posted to the relevant account.
