PROJECT

Description: Text summarization is an essential task in natural language processing that involves reducing a large body of text while retaining its most important information. In this project, machine learning algorithms like BART, Seq2Seq, and TextRank were utilized to create a system capable of generating concise and coherent summaries from lengthy documents. BART, a transformer-based model, excels in handling complex summarization tasks, while Seq2Seq provides a robust framework for sequence prediction, and TextRank leverages graph-based ranking techniques to extract key sentences.
