Project

Database Simulator

- This project simulates a basic relational database management system (RDBMS) using Java.
- It supports core functionalities like creating tables, inserting, updating, deleting, and querying data — mimicking the behavior of SQL operations (DDL, DML, and DQL).
- The goal is to demonstrate how database-like operations can be implemented manually using object-oriented programming concepts, collections, and file handling.

Internship certificate

- Data Analytics Job Simulation Certificate (DELOITTE).
