LANGUAGES

Java (for automation)

Other Projects:

Worked on multiple short-term projects, leading estimation and QA efforts, and delivering feature-specific design recommendations to enhance domain-specific projects.

1. Education - US
2. Inventory Management - India
3. Dating Application - India
4. Beer Bar App - Africa

Tech Stack Expertise:

Experience in: Java, Python, .NET, PHP, Angular, React JS & Flutter

Roles and Responsibilities: (Throughout the Career)

Leadership and Management:

- **Cross-Functional Collaboration** - Communicate effectively with developers, product managers, business analysts, and other stakeholders to ensure alignment on quality goals and priorities.
- Analyzing & Validating the completeness of business requirements or specifications.
- **Team Supervision** - Lead and manage a team of QA testers, providing guidance, coaching, and mentoring to team members.

- **Task Assignment** – Assign testing tasks and responsibilities to team members based on project requirements and individual strengths.
- Part of **Scrum Meetings** (Sprint Planning Meeting, Daily Standup Meeting (Daily Scrum), Sprint Review Meeting, Sprint Retrospective Meeting, Backlog Refinement (Grooming) Meeting, Release Planning Meeting & Dependency Review Meetings).
- **Generated Report Summary** – Successfully extracted and analyzed project data from Jira, providing actionable insights to enhance team performance and optimize resource allocation. Created comprehensive reports highlighting key metrics, including issue resolution rates, cycle time, and team velocity, to inform strategic business decisions.

Quality Assurance Activities:

- **Test Planning** – Collaborate with project managers and stakeholders to create test plans, test strategy, and test estimation for Web application and Mobile application projects, resulting in a 30% reduction in critical defects and an overall improvement in application quality.
- **Test Case Design** – Oversee and contribute to the design of comprehensive test cases and test scenarios that cover various aspects of the software, leading to a 20% decrease in defect resolution time and an enhanced user experience..
- **Test Execution** – Coordinate and monitor the execution of test cases, ensuring that testing progresses according to the established schedule and check the Root Cause Analysis.
- **Testing Types** – Performing various types of testing – Smoke testing, Sanity testing, Retesting, Regression testing, Integration testing, System testing, Crossbrowser testing, GUI testing, UAT testing, Agile testing.
- **Defect Tracking** – Log, prioritize, and track defects using bug tracking tools like Jira, Bugzilla. Provide detailed bug reports with steps to reproduce and expected results in Defect Life Cycle
- **Regression Testing** – Ensure that regression testing is performed to verify that new code changes do not introduce defects into existing features.
- **Test Documentation** – Create and maintain comprehensive test documentation, including test scripts, test cases, test data, and test plans.
- **Risk Assessment** – Participate in risk assessment activities and help mitigate risks related to software quality.
- **Performance Testing** – If applicable, conduct performance testing to assess system scalability, reliability, and response times.
- **DataBase Logs Analysis** – Monitored and analyzed MongoDB logs to identify trends, troubleshoot issues, and optimize system security, ensuring timely detection of potential security threats.
- **WordPress(CMS)** – Performed WordPress testing to ensure functionality, compatibility, performance, and security of websites to create, manage, and publish easily through CMS.
- **Stabilization Activities:** Knowledgeable in stabilizing post-development builds by identifying and resolving issues before release.
- **Release Management:** Hands-on experience in performing release activities, including shipping hotfixes, service packs (SP), and feature packs (FP).

Project Coordination:

- **Project Management** – Collaborate with project managers, developers, and other stakeholders to ensure that QA activities align with project goals, Timelines, Test Closure and Test Process Improvement as SPoC.
- **Risk Assessment** – Identify potential risks related to software quality and work on strategies to mitigate them.
- **Test Reporting** – Generate and communicate test reports to project stakeholders, providing insights into the quality of the software.
- **Test Automation** – Depending on the organization's needs, collaborate with automation engineers to determine which test cases can be automated and support the automation effort.
